Client Instructions - Normal responses to vaccines include less energy this evening, some soreness over injection sites, and a decreased appetite. Over exuberant immune system responses include anaphylaxis, vomiting, extreme lethargy, large swelling over injection sites, swelling of the face, or difficulty breathing. If you notice any of these exuberant responses, please let us know immediately.

www.Chewy.com is an easy way you can order your heartworm prevention and flea and tick

medication online. As you try to order from their site, they will ask you what vet clinic you use and they will email us a prescription request. After we approve the request, Chewy will mail the meds to your doorstep.

We recommend feeding a grain inclusive diet as long as your dog is not allergic to grains. Grain free diets have been shown to be associated with heart disease in dogs.

Overall both dogs looked great on exam. Sadie was on the lean side so her food can be increased by a small amount (~10%). Sadie also had more tartar build up on her teeth (primarily the back teeth). I recommend brushing her teeth daily with a dog specific tooth paste.

Both dogs will be due for a booster update in 3-4 wks, this can be done with a technician.

Age: 6y **Weight:** 29.00 **Respiration:** 20.00 **Pulse:** 104.00
CRT: pink 2/ secs. **BCS:** 4.00 / 10.00

EW: 09-16-24 at 6:41p: Spoke with Brad. Discussed option for Luna. Per O, P does pretty well at daycare and boarding but when she's out of her regular routine she gets more anxious. O is going to work on making adjustments to her routine but discussed anti-anxiety medication options to help P with these adjustments. Recommend starting with Trazodone, may consider adding on Gabapentin if necessary. Let O know meds would be ready by tomorrow.
